

NEW HORIZONS SAN ISIDRO, CHILE

Once again SEPAC opens new markets in South America, this time an important Power Generator such as Sn. Isidro in Chile.

The important company such as ENEL gave us the confidence to design, manufacture and commission two regulators, one for the Turbo Generator and the other for the Turbo Vapor.

The supplied RAV 111 2P AVR's have the most advanced application technology, operator communication and absolute control in operation.

The equipment was designed, manufactured and tested under the highest quality and safety standards that have characterized our company for more than 35 years in the electrical market.

The proven success outside of Mexico in countries such as the United States, Guatemala, Colombia, Costa Rica, the Dominican Republic and now Chile makes it easier for us to have reliable equipment manufactured under the particular needs of our clients.

For this reason, we are pleased to serve this new South American market where the growth of electrical energy demands reliable and highly operational equipment.
