

SERPRO WINS THE CONFIDENCE OF MAJOR CONTRACTORS

NEW CASE OF SUCCESS: CONTRACT SERPRO / ISOLUX. CT PETACALCO.

After the success obtained a couple of years ago, with the supply, installation and commissioning of excitation systems for machines of 350 MW at Manzanillo II and Villa de Reyes power plant, in a contract handled by SIEMENS of GERMANY, SERPRO repeats again in 2007 the same experience with the company ISOLUX of SPAIN.

In a "RM" project for the integral modernization of 2 units of 350 MW at PETACALCO thermoelectric power plant, which is one of the highest capacity in Comisión Federal de Electricidad, ISOLUX has chosen to install SEPAC excitation systems, manufactured by SERPRO.

Petacalco thermoelectric plant, one of the most important power plant in CFE. Mexico

Electronic master controller for 350 MW units.
Petacalco power plant

Not only the offered technology gave satisfactory results but also:

the quality and skills of our site installation team.

the experience of our engineers in commissioning services

the capacity of management of our site project supervisors

Both excitation systems of 6000 Amps, installed in a record time, have been tested according to LAPEM procedures in a successful and disciplinary way.

With this, SERPRO contributed to the success of ISOLUX, who delivered the two 350 MW machines for commercial operation on time and within the schedule stated in the contracts.
