

## SEPAC JOINS THE OPENESS OF THE SECTOR

SEPAC is directing actions to meet the needs arising from the energy reform in Mexico, seeking to strengthen the productivity and energy saving of conventional electricity and development of renewable energies.

Towards this aim, SEPAC has implemented strategies to provide cost-effective solutions for increased efficiency and the improvement of the quality of energy to new entrants of the private generation.

Through cutting-edge technologies we offer tailored solutions for the retrofit of the current equipment's of control and protection of their generating units.

In this way, SEPAC joins the efforts of opening of the energy sector, providing specialized services, competitive supply chains, along with the highest standards of quality and total compliance with the electrical standards that today's industry requires.

Once again SEPAC evidence its active participation to join the country's growth.
