

OUR EQUIPMENTS ARE ALREADY IN THE CARIBBEAN

There are several changes on these equipments, strengthening reliability on them.

The new GE Fanuc **PACsystem** platform is with no doubt a value added in our equipments, with the advantages of:

- Having better memory capacity
- Being faster than the former 90-30
- Having more variety managing protocols of communication
- Being capable to protect events

All these along with the reliability of producing high quality equipments, have allowed us be leaders in the Mexican market with more than 25% of total CFE installed capacity controlled by our excitation systems . We are as well an important part of the market in Central and South America, in countries such as: Colombia, Costa Rica, Guatemala, Honduras and now also in the Dominican Republic.

This same reliability and quality with which **SEPAAC Corp.** manufactures and commissions its equipments, has also allowed us to get introduced into the North American market, creating additional successful cases for our track record .

The opportunity of installing our equipments in the Caribbean came to good term when AVR equipments were supplied for Las Damas, Rincon and Angostura in the Dominican Republic, to the customer Empresa de Generacion Hidroelectrica Dominicana.

SERPRO, manufacturer in Mexico of the **SEPAAC** group, submitted these equipments to stringent quality and functioning tests. It even was the process model followed during ISO 9001:2000 evaluation audits, which TÜV Rheinland successfully applied to SERPRO at that time.
