

QUALITY IS OUR PHILOSOPHY

For years SEPAC brand has been synonymous of quality in the Mexican Electricity Market; quality that has crossed borders and had made SEPAC an important player in the Latin American Market.

In early 2010 SERPRO was re-certified in ISO 9001 : 2008 by **TUV Rheinland** of Mexico that led us to be up to date on this important legislation, without any significant finding for obtaining a valid qualification .

In February 2010 an audit on SEPAC quality was conducted by **Schneider Electric** Mexico in order to be considered a trusted supplier. It turned out to be in full compliance with a qualification of 100/100 points.

In March 2010 **Alstom Transport** performed a supplier assessment, in which SERPRO gained the approval as a trusted supplier based on the norm ISO 9001: 2008 with a rating of 98/100 points on the overall audit.

In July 2010 the Federal Electricity Commission **LAPEM** audited again our organization and quality system to provide a rating as a Reliable Provider under a satisfactory evaluation based on the new ISO 9001: 2008. Once again they extended us their trust and support to be included as an Trusted Supplier with a rating of 99/100 points

In October 2010 the **Central Core Electric Laguna Verde** conducted a comprehensive audit of our organization, in order to be included in the select group of suppliers for electrical equipment. On November 5, 2010 SERPRO was successfully approved and included in the Quality Group for the Nuclear Sector under the **10CFR50** regulations. This accreditation makes us the only provider in Mexico allowed to supply electrical and electronic equipment in the nuclear energy sector.
